

Mini E-Commerce Backend - Authentication Blueprint

MongoDB + Express + JWT + bcrypt

1. Authentication Flow

Client -> Register -> Database -> Login -> JWT Token -> Client stores token ->

Authorization Header -> Auth Middleware -> jwt.verify() -> req.user -> Protected Route

2. Register API

Item	Value
Method	POST
Endpoint	/auth/register
Body	name,email,password
Response	201 Created

3. Login API

Item	Value
Method	POST
Endpoint	/auth/login
Body	email,password
Response	JWT Token

4. JWT

Component	Purpose
Token	Sent with protected requests
Payload	User data
Secret Key	Sign & Verify
jwt.sign()	Create token
jwt.verify()	Validate token

5. Auth Middleware

1- Read Authorization Header

2- Extract Bearer Token

3- Verify Token

4- req.user = payload

5- next()

6. bcrypt

Hash password before saving. Compare password during login.

7. Protected Routes

Type	Description
Public	Register / Login
Protected	Requires JWT
Admin	Requires JWT + admin role

8. Status Codes

Code	Meaning
200	OK
201	Created
400	Bad Request
401	Unauthorized
403	Forbidden
404	Not Found
500	Internal Server Error
